IDMS™: ADS Language Overview 200

EDUCATION COURSE DESCRIPTION

SUPPORTED PRODUCT RELEASE(S)
IDMS™
Version 19.0

COURSE TYPE, LENGTH, & CODE
- Web-Based Training (WBT)
- 30 Minutes
- 06IDM20670

Course Overview

Application Development System (ADS) is a tool that is used to expedite the writing and testing of modular applications. With ADS, you can develop online and batch applications.

Activities such as flow-of-control processing, data storage definition, data verification, editing, and error handling are specified through a series of screens instead of conventional detailed code.

This course provides an overview of the ADS language, its syntax, structure, and command groups.

In This Course, You Will Learn How To:

- Code ADS process language statements

- Use the Dictionary Module Editor (DME)

- Use the Transfer Control Facility (TCF)
