Course Overview

Your job as a mainframe expert requires a broad range of knowledge. Your responsibilities include understanding the relationships between the sysplexes, z/OS systems, started tasks, and transactions that run on the mainframe.

Mainframe infrastructure and application connections change constantly, requiring substantial SME time to understand and maintain.

This micro-learning introductory course shows you how Mainframe Topology helps you obtain information about those relationships, enabling a quick hand-off to your SMEs for in-depth root cause analysis when problems occur.

Note: Mainframe Topology is distributed with CA OPS/MVS® Event Management and Automation Version 14.0.

This Course Will Show You How To:

- Describe Mainframe Topology.

- Navigate and obtain topology data from the Hierarchical and Connected views.
