

# MFA - Advanced Authentication Mainframe Overview 100

## Course Overview

Type  Web-Based Training  
Length 15 min  
Code 06AAM10020

### AUDIENCE:

- Security Administrator
- End User
- Security Manager
- Anyone taking an active part in security implementation or administration

This course introduces core MFA concepts, supported methods, and relevant use-cases within the context of mainframe security. You'll learn how to strengthen authentication using MFA, meet regulatory requirements, and leverage Broadcom's Advanced Authentication Mainframe (AAM) MFA solution.

The objective of this course is for learners to be able to:

- Explain what MFA is and its importance in mainframe security
- Identify key business, compliance and security drivers
- Understand supported MFA methods in Broadcom's AAM solution and how to choose the right one
