

# In-Band Multifactor Authentication for Advanced Authentication Mainframe

## Course Overview

Type  Web-Based Training  
Length 20 min  
Code 06AAM20090

### AUDIENCE:

- Security Administrator
- End User
- Security Manager
- Anyone taking an active part in security implementation or administration

In this course, you will learn more about In-Band Multifactor Authentication, which is one of the methods that AAM MFA will use to verify a user's identity in security systems. You will gain a comprehensive understanding of In-Band Authentication, including its workflow, advantages, and key considerations.

The objective of this course is for learners to be able to:

- Describe In-Band Multifactor Authentication
- Explain which authentication methods are supported for In-Band MFA
- Identify the prerequisites that need to be addressed before configuring the RADIUS factor
- Understand the administrative process required to configure the RADIUS factor in ACF2™, Top Secret® and/or IBM RACF®
