Course Overview

Plan Analyzer® for Db2 for z/OS (Plan Analyzer) improves Db2 performance by efficiently analyzing SQL and using expert rules to offer recommendations for SQL performance improvement.

You can analyze any SQL, from a single statement to an entire application.

The product also lets you test plans before they go live to predict their behavior in production. Expert rules evaluate the SQL statements and the underlying physical objects, and make recommendations for improving performance.

This course is designed to introduce you to the Quick Explain functionality and show you how you can use it to help diagnose SQL performance issues.

This Course Will Show You How To:

- Describe the Quick Explain functionality in Plan Analyzer Explain Services

- Understand common scenarios where you can use Quick Explain to diagnose SQL performance issues

- Execute a quick explain that uses a Broadcom-defined explain profile
