## Course Overview

Plan Analyzer® for Db2 for z/OS (Plan Analyzer) improves Db2 performance by efficiently analyzing SQL and using expert rules to offer recommendations for SQL performance improvement.

You can analyze any SQL, from a single statement to an entire application.

The product also lets you test plans before they go live to predict their behavior in production. Expert rules evaluate the SQL statements and the underlying physical objects, and make recommendations for improving performance.

This course is designed to will help you simplify your explain processes by showing you how to work with Broadcom-defined explain profiles in Plan Analyzer.

## This Course Will Show You How To:

- Explain the purpose of Broadcom-defined explain profiles and how they work
- Execute a quick explain that uses a Broadcom-defined explain profile
- Suppress the Broadcom-defined explain profile panel
