- Web-Based Training (WBT)
- 1.0 Hours
- 06DCM20100

Course Overview

Datacom is a reliable database repository with enterprise-wide high-volume workload and fault-tolerant capabilities. Datacom and its family of rDBMS products provide you with that repository.

Datacom provides transaction processing performance for existing and new workloads, helping you consolidate business functions on a central data repository, as needed. When combined with related solutions, Datacom delivers cost-effective and reliable database processing.

This course introduces you to the key concepts related to the Datacom/DB Datadictionary.

This Course Will Show You How To:

- Describe the relationship between the Datadictionary and the Datacom/DB Multi-User Facility (MUF)
- Identify the structural components of a database
- Describe Datadictionary content management using version and status
- Name the methods for defining a database
- Identify the Datacom Products and Facilities that use the Datadictionary
