COURSE TYPE, LENGTH, & CODE

- Web-Based Training (WBT)
- 30 Minutes
- 06DCM20260

Course Overview

Datacom is a reliable database repository with enterprise-wide high-volume workload and fault-tolerant capabilities. Datacom and its family of rDBMS products provide you with that repository.

Datacom Datadictionary manages your data processing environment, providing a service to your software (Datacom/DB) and to the people working with the data. When you use Datacom Datadictionary online (DDOL), you display and interact with panels rather than entering Datacom Datadictionary functions in batch mode.

This course introduces you to the Database Maintenance (DBMAINT) function of Datadictionary Online (DDOL).

This Course Will Show You How To:

- Describe how and when to use the Database Maintenance (DBMAINT) mode
- Describe how the Selection Criteria Fill-in panel is used
- Use margin commands to create a database structure and perform database maintenance functions
