Endevor Team Build: Introduction to sbomz 100

EDUCATION COURSE DESCRIPTION

COURSE TYPE, LENGTH, & CODE
- Web-based Training
- 15 minutes
- 06END10240

WHO SHOULD ATTEND
- Developers
- Systems Engineers
- Administrators
- Mapping Administrators

Course Overview

As cyberattacks, hacks, and ransomware challenge organizations, they strive to clean up their software supply chains. Organizations increasingly turn to a high visibility tool: the software bill of materials (SBOM).

To that end, Broadcom has introduced sbomz. sbomz is a z/OS UNIX-based software bill of materials generation utility that enables you to generate SBOMs for Endevor and Endevor Team Build applications.

sbomz helps you configure supply chains to maximum security and provide evidence of policy compliance throughout the software supply chain. Using sbomz, you automate policy compliance enforcement and ensure the software chain is not vulnerable to compromise.

In this course, you'll see how sbomz helps your organization address security challenges via SBOMs.

This Course Will Show You How To:

- Articulate what an SBOM is

- Define the Endevor Team Build sbomz

- Articulate the use case of the Endevor Team Build sbomz
