

# Endevor Team Build: Introduction to bldz 200

## EDUCATION COURSE DESCRIPTION

### COURSE TYPE, LENGTH, & CODE

- Web-based Training
- .50 hours
- 06END20520

### WHO SHOULD ATTEND

- Developers
- Systems Engineers
- Administrators

## Course Overview

As a mainframe DevOps engineer, you are responsible for the automation and integration processes that increase the efficiency and adoption of software solutions on z/OS. To achieve the goals, you can use Endevor Team Build that modernizes the build experience for z/OS. Endevor Team Build is a light-weight build engine that enables you to work with Endevor source files and create executable code.

In this course, you'll see how Endevor Team Build leverages its features to build applications on the mainframe while both leveraging Broadcom's award winning software change management software, Endevor, and other Git tools, such as GitHub, Bitbucket, etc.

## This Course Will Show You How To:

- Define the bldz component
- bldz prerequisites and configuration
- What are the features/benefits of bldz
- What are the key operational units
- Describe the JavaScript built-in modules
- Identify the available CLI commands
