

Endevor Team Build: Introduction to publishz 200

EDUCATION COURSE DESCRIPTION

COURSE TYPE, LENGTH, & CODE

- Web-based Training
- .25 hours
- 06END20530

WHO SHOULD ATTEND

- Developers
- Systems Engineers
- Administrators

Course Overview

As a mainframe DevOps engineer, you are responsible for the automation and integration processes that increase the efficiency and adoption of software solutions on z/OS. To achieve the goals, you can use Endevor Team Build that modernizes the build experience for z/OS. Endevor Team Build is a light-weight build engine that enables you to work with Endevor source files and create executable code.

In this course, you'll see how Endevor Team Build leverages its features to publish applications while both leveraging Broadcom's award winning software change management software, Endevor, and other Git tools, such as GitHub, Bitbucket, etc.

This Course Will Show You How To:

- Articulate the use case for Endevor Team Build - publishz
- Define the publishz component
- Articulate the integration with Endevor Bridge for Git
