

# Endevor Team Build: Introduction to the Standard Library 200

## EDUCATION COURSE DESCRIPTION

### COURSE TYPE, LENGTH, & CODE

- Web-based Training
- .50 hours
- 06END20600

### WHO SHOULD ATTEND

- Developers
- Systems Engineers
- Administrators
- Mapping Administrators

## Course Overview

As a mainframe DevOps engineer, you are responsible for the automation and integration processes that increase the efficiency and adoption of software solutions on z/OS. To achieve the goals, you can use Endevor Team Build that modernizes the build experience for z/OS. Endevor Team Build is a light-weight build engine that enables you to work with Endevor source files and create executable code.

In this course, you'll see how Endevor Team Build offers the Standard Library which is embedded in the bldz function and contains build script libraries for several common mainframe development languages, that significantly reduce the complexity of creating a build.

## This Course Will Show You How To:

- Define the Endevor Team Build Standard Library
- Articulate the use case of the Endevor Team Build Standard Library
