- Communities
- Learning Path
- ESP Workload Automation Product Documentation
- Automic Automation Intelligence Product Documentation
- Product Information

Course Overview

ESP Workload Automation Intelligence is a complete solution to define, monitor and manage scheduled and event-based workloads across all enterprise applications in z/OS, Windows, Linux, hybrid and multi-cloud environments. Predictive analytics detects SLA breaches as early as possible to minimize business impact.

This course is designed to introduce the integration of two essential pieces of the ESP Workload Automation Intelligence solution: ESP Workload Automation and Automic Automation Intelligence.

This course includes demonstrations that illustrate how to use the historical analysis, real-time monitoring, alerting, and reporting capabilities that result from integrating ESP Workload Automation and Automic Automation Intelligence.

This Course Will Show You How To:

- Understand, at a high-level, how to integrate ESP Workload Automation with Automic Automation Intelligence.

- Identify the Automic Automation Intelligence functions that are designed to:

  - Analyze historical job performance.

  - Provide real-time monitoring via lists and graphical representations of data.

  - Send alerts when an event meets user-specified criteria.

  - Generate configurable reports that include data from all schedulers on your system.
