

CA 1™ Flexible Storage™: System Options 2 200

EDUCATION COURSE DESCRIPTION

COURSE TYPE, LENGTH, & CODE

- WBT
- 50 Minutes
- 06FST20020

WHO SHOULD ATTEND

- System Administrators
- Auditors
- Data Owners
- Customers

Course Overview

This course shows you the characteristics and the structure of tape sub-pooling, including read-only and tape stacking. It explains the relationship between the TMOSCR, where you define the sub-pools, and the TMONSM member, where you assign which files are assigned to which scratch pools. In addition, providing the options available in the TMOEC member described the various usages of the TMOKEY member and described the multiple usages for the new TMOBLxx member.

Note: If you'd like to share your ideas for Broadcom Mainframe product training, subscribe to the [Mainframe Education Community](#), where we'll share calls for input.
