CA Gen: Encyclopedia – Transfer Data

EDUCATION COURSE DESCRIPTION

SUPPORTED PRODUCT RELEASE(S)
CA Gen 8.6

COURSE TYPE, LENGTH, & CODE
- eLearning
- 1.15 hours
- 06GEN20360

Course Overview

In an ever-changing business and technical climate, organizations must have cost effective and agile business applications that help improve customer service, reduce costs, increase profits, get to market faster, and respond more rapidly to competitive challenges. Whether the change is driven by acquisition, regulatory mandates, or advancing technology, organizations face continued pressure to speed application delivery while reducing costs. In addition, application data must integrate across multiple platforms and computing environments which remains a significant challenge.

CA Gen addresses all these issues with a proven model-driven development environment for designing, deploying, and maintaining high-performance, scalable enterprise applications for multiple platforms and multiple architectures. In CA Gen, the model is the source for generated applications and is maintained in an encyclopedia. In this course, you will discover how encyclopedias provide a central repository of objects and allow large teams of developers to work on multiple development projects at the same time

This Course Will Show You How To:

- Describe data transfer between the Encyclopedia and Workstation
- Describe uploading and downloading
- Upload and download a model
