## Course Overview

As IT organizations propagate applications that span mobile-to-mainframe environments, having reliable tools that drive quality in developing and maintaining associated software assets becomes key to retaining and growing business.

CA InterTest for CICS helps you deliver quality applications quickly and can improve CICS stability by preventing errors before they occur. Designed to provide you with automated, reliable, and cost-effective mainframe testing tools, this product helps ensure that programs are well tested before they go into production.

This course is designed for programmers who test, debug, and fine-tune IBM CICS Transaction Server applications written in COBOL, Programming Language One (PL/I), Assembler, and Language Environment. It will show you basic navigation and the core testing functionalities included in CA InterTest for CICS, including use of symbolics, monitoring, breakpoints, and Keep window options.

## This Course Will Show You How To:

- Provide CA InterTest for CICS with symbolic information about your program
- Navigate the ITST Primary Option Menu
- Examine your source listing
- Turn on monitoring
- Set and remove breakpoints
- Select data items for the Keep window and turn on the automatic Keep window option
- Execute the program
