

# CA RC/Query® for DB2 for z/OS Database Administration Tasks Command Overview 200

## EDUCATION COURSE DESCRIPTION

### SUPPORTED PRODUCT RELEASES

CA RC/Query® for DB2 for z/OS  
Version 20.0

### COURSE TYPE, LENGTH, & CODE

- WBT
- 20 minutes
- 06RCQ20010

### WHO SHOULD ATTEND

- Database Administrators

### COURSE RESOURCES

- [Communities](#)
- [Product Documentation](#)
- [Product Information](#)

## Course Overview

CA RC/Query® for DB2 for z/OS (CA RC/Query) is a comprehensive DB2 catalog management facility that helps you query, analyze, maintain and manage the DB2 subsystem. CA RC/Query generates reports and presents you with a cohesive view of your DB2 objects and their relationships in a variety of report formats. From any report, you can select a variety of options to generate more detailed information about such attributes as an object's relationship to other objects in the DB2 subsystem. You can also build new reports directly from the currently displayed information, drill down for more detail or move laterally for a broader view.

This course consists of a 20-minute recorded presentation designed to provide an introductory overview of the database administration tasks you can complete using CA RC/Query commands.

## This Course Will Show You How To:

- Describe how CA RC/Query functions as a launch pad to perform multiple DBA functions using the CA Database Management Solutions for DB2 for z/OS products.
- Identify product-specific and general line commands you can use to take action on an object.
- Perform different functions against a table, such as browsing, copying, editing, or using RUNSTATS.
- View tablespaces and tablespace detail.
- Generate DDL or HDDL for an object.
- Use Quick Migrate to migrate an object from one subsystem to another.
- Use the WHERE clause.
- Use EXPLAIN functions to identify potential access path changes that result from a rebind.
