

# SDSF Conversion from Internal to External Security for ACF2™ and Top Secret®

## EDUCATION COURSE DESCRIPTION

### COURSE TYPE, LENGTH, & CODE

- WBT
- 24 Minutes
- 06SEC20180

### WHO SHOULD ATTEND

- Customers

## Course Overview

This is essential training for anyone planning to migrate to z/OS versions 2.5 and above. With z/OS 2.5, all SDSF users must use the External Security Manager (ESM), such as IBM RACF®, ACF2™, or Top Secret®, rather than internal SDSF security via ISFPARMS. In this course, you will learn how to convert SDSF ISFPARMS internal security to ACF2™ and Top Secret® External Security.

After completing this course, you will be able to:

1. Describe the SDSF External Security Requirements
2. Understand what differentiates SDSF External Security from Internal Security
3. Learn what is required for a successful migration
4. Deploy the principles of Broadcom's Expert Change Planning to aid in your conversion

This course is divided into four modules, which you can complete at your own pace.
