

CA Mainframe Security Insights Platform: Examine Classification & Pervasive Encryption 200

EDUCATION COURSE DESCRIPTION

RELEASE(S)

CA Mainframe Security Insights Platform
Version 1.0

COURSE TYPE, LENGTH, & CODE

- Web-based Training (WBT)
- 15 Minutes
- 06SIP20110

Course Overview

CA Mainframe Security Insights Platform (Security Insights) aggregates data from your mainframe environment and its security products into reports that offer insights into your mainframe security posture. These reports help you identify and reduce risk to your mainframe.

Sensitive or regulated data that is not encrypted poses a risk to your organization. Knowing the classification of a resource helps determine how secure that resource must be. Knowing whether those resources that include sensitive or regulated data are pervasively encrypted offers additional insight about the risk level. This information helps you identify high-risk resources that might require more security measures.

This course will teach you how to use the Security Insights use case: "Examine Classification and Pervasive Encryption by Resource" to create a report and view the results.

This Course Will Show You How To:

- Describe the Security Insights use case
- List the use case prerequisites
- Create and analyze the use case report
- Describe report messages
