- Spool™ Version 14.0

COURSE TYPE, LENGTH, & CODE
- WBT
- 1 Hour
- 06SPO20050

WHO SHOULD ATTEND
- Administrators
- System Programmers

Course Overview

Spool™ is a solution that securely manages your business-critical print and report delivery requirements across networks, platforms, and locations. Spool provides nonstop operation as it collects reports from multiple sources (including z/OS, Windows, Linux, and UNIX), while offering enterprise-wide spooling and print capabilities. Spool enhances your current spool environment, providing a central point of control over day-to-day print management issues and securing the distribution of important data.

This course is designed for anyone responsible for Spool installation and maintenance. It consists of an hour-long recorded presentation that explains and demonstrates the process of installing Java transformers.

Note: If you'd like to share your ideas for Broadcom Mainframe product training, subscribe to the Mainframe Education Community, where we'll share calls for input.

This Course Will Show You How To:

- Identify the Software Requirements for installing Java Transformers

- Understand the Installation process

- Eliminate the need to use dedicated PSF printers and IPDS data stream conversion cards

- Utilize the automatic conversion of View, AFP, and Metacode reports to PDF reports that can be viewed using Web Viewer

- Explain the post-installation steps
