Course Overview

Visibility into critical business transactions that provide monitoring for complex application environments is vital for effective performance management.

Real-time visibility is a critical asset to simplify mainframe performance management. SYSVIEW ® Performance Management (SYSVIEW) provides the ability to monitor against alerts, drill down for intuitive problem identification, and enables you to base automation on performance intelligence.

This introductory course contains a brief video that demonstrates different methods that you can use to access and navigate the online help in SYSVIEW.

This Course Will Show You How To:

- Access help via a help menu, a list of help topics, or by issuing the FINDHELP command.

- Obtain command-specific and context-specific help.
