

SYSVIEW® Performance Management: Using Batch Report and Utilities (BRUTIS) 200

EDUCATION COURSE DESCRIPTION

COURSE TYPE, LENGTH, & CODE

- WBT
- 15 minutes
- 06SYS20790

WHO SHOULD ATTEND

- Systems Programmer

RESOURCES

- [Product Documentation](#)
- [Mainframe Education Community](#)
- [SYSVIEW Community](#)
- [Mainframe Course Catalog](#)

Course Overview

Visibility into critical business transactions that provide monitoring for complex application environments is vital for effective performance management.

Real-time visibility is a critical asset to simplify mainframe performance management. SYSVIEW ® Performance Management (SYSVIEW) provides the ability to monitor against alerts, drill down for intuitive problem identification, and enables you to base automation on performance intelligence.

This course introduces the Batch Report and Utilities (BRUTIS) functionality in SYSVIEW- when, why, and how to use it.

BRUTIS helps Systems Programmers gain contextual insights and execute on-demand actions for resources on SYSVIEW displays, which helps shorten the mean time to problem resolution.

This Course Will Show You How To:

- Explain how using BRUTIS helps reduce mean time to resolution
- Describe the purpose of each BRUTIS command
- Execute a batch job in the context of the data on your SYSVIEW display
