Trusted Access Manager for Z: Performing Self De-Elevation 200

EDUCATION COURSE DESCRIPTION

COURSE TYPE, LENGTH, & CODE
- WBT
- 8 Minutes
- 06TAM20030

WHO SHOULD ATTEND
- Customers

Course Overview

This video will demonstrate how a Systems Programmer who previously elevated to gain access to a system-critical parameter library removes the entitlements gained from elevation. To remove access to this critical system resource, the Systems Programmer needs to:
- Display a list of ACTIVE elevations to determine which entitlement he/she should remove
- De-elevate from the TAMz Class that allowed access to the resource
- Optionally verify removal of the entitlement by attempting to access the system-critical library, which will now fail

Note: If you'd like to share your ideas for Broadcom Mainframe product training, subscribe to the Mainframe Education Community, where we'll share calls for input.
