- OnDemand Web-Based Training (WBT)
- 1 Hour & 15 Minutes
- 06TPX20060

PREREQUISITES

- Familiarity with z/OS

WHO SHOULD ATTEND

- Storage Administrators
- System Programmers
- Operators
- Data Center Managers
- IT Managers

Course Overview

Your terminal is connected to a VTAM network where you have access to a number of applications. If your work requires more than one of these applications, you may have to repeatedly log off one and log on to another. This can become a time-consuming task that takes up system resources. CA TPX Session Management solves this problem by letting you access all your applications from a single menu and switch from application to application.

In this course, you will learn about CA TPX user administration, including access and security settings for the various roles. This course content is presented as an overview of the product and its features along with several interactive demonstrations.

What You Will Learn

- Describe CA TPX user administration concepts
- Identify CA TPX user and administrator types
- Describe CA TPX dynamic users
- Describe CA TPX security features
- Describe CA TPX batch administration features

For Managers

This course focuses on CA TPX Session Management user concepts & types. Students are taught how to use manage the various users and administrator types as well as incorporating the available user security features within CA TPX.

With knowledge of how to manage the various user and administrator types, your staff can design, and ultimately execute, a robust user structure that enables user and administrators to access just the information required for their job roles. This will help your staff navigate easier and faster, saving time and increasing productivity & security.

Course Agenda

- CA TPX User Administration Concepts
- CA TPX User and Administration Types
- Dynamic Users
- Security Features
- Batch Administration Features
