Course Overview

Vantage™ Storage Resource Manager (Vantage) centrally manages complex storage environments to help ensure that critical storage assets are fully optimized, data is protected, and application outages are eliminated. Proactive, policy-based exception management automates routine manual functions to increase personnel productivity and improve service levels.

Vantage StoragePoint™ Web Client (Vantage StoragePoint) is an easy-to-use browser interface for Vantage, with centralized monitoring, configuration, and policy-based automation features.

This course shows you how to monitor Vantage and the z/OS system using objects in Vantage StoragePoint.

This Course Will Show You How To:

- Monitor Vantage operations.
- Identify the objects that you can use to analyze z/OS resources.
